CYPRUS THOMPSON CREEK WATER MONITORING PROGRAM 1987

1.0 INTRODUCTION

This document describes the Standard Operating Procedures for the collection and analysis of surface and ground water samples from the Cyprus Thompson Creek Mine. The data obtained during the years 1982-86 have been reviewed to produce this plan.

1.1 OBJECTIVES

The water quality monitoring program has been designed to obtain samples and analytical results that give true indications of the quality of mine area waters. The information obtained from the monitoring program will be used to assess the effectiveness of mitigation measures. The major areas covered by this water quality monitoring plan are as follows:

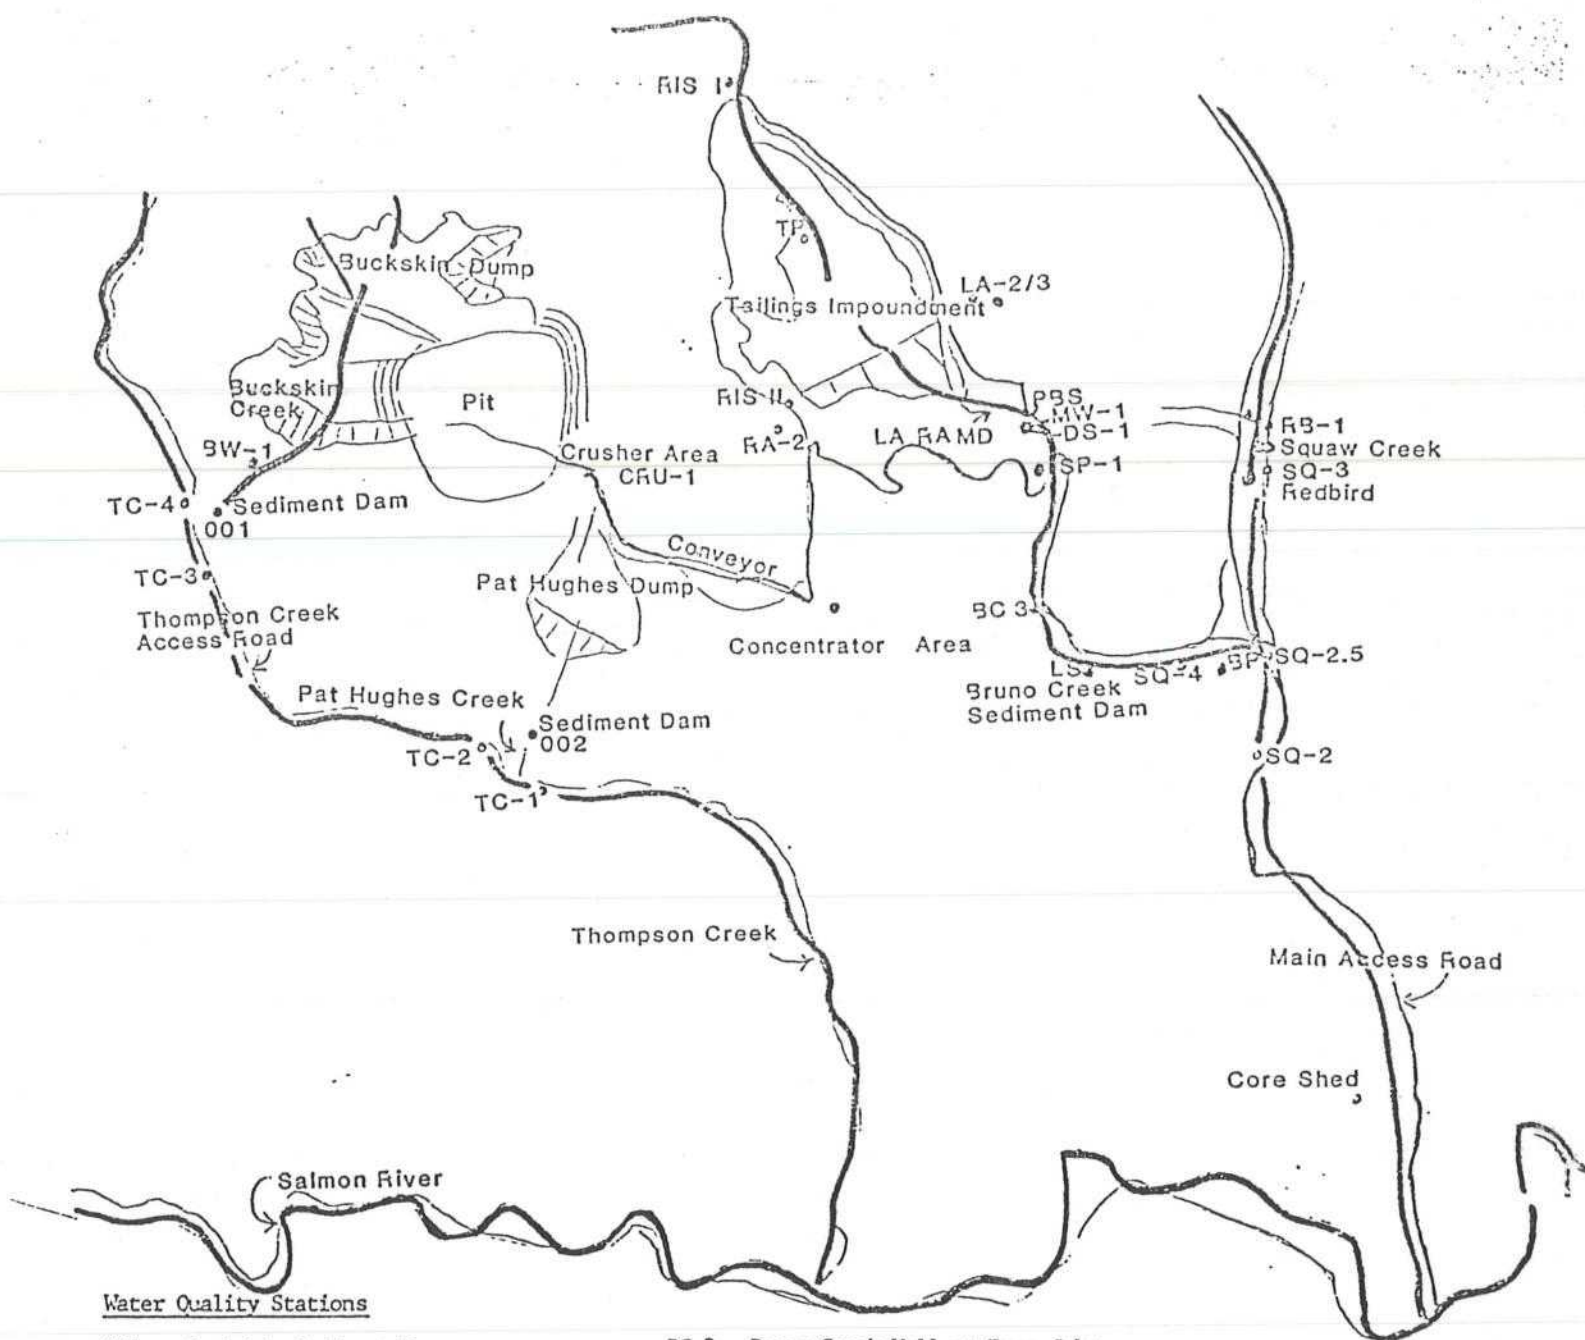

- ° Surface water quality of the Squaw and Thompson Creek drainages.
- ° Quantity and quality of effluents released from settling ponds on Pat Hugnes and Buckskin creeks.
- ° Surface and ground water quality in the tailings impoundment drainage basin.
- ° Quality of ground water developed as potable sources for workers at the mine site.
- ° Fish and invertebrate populations of streams draining the active mine and mill operation areas.

1.2 SITE DESCRIPTIONS

1.2.1 Surface Water Stations:

Surface water sites on Squaw and Thompson Creeks were chosen prior to construction for monitoring primary and secondary impacts of mining activities.

Cyprus Thompson Creek

Water Quality Stations

001	Buckskin Sediment Dam	BC-3	Bruno Creek Well at Pope John Boulevard
TC-4	Above Buckskin Creek	RA-2	Right Abutment/Tailings Well
TC-3	Below Buckskin Creek	LA-2/3	Left Abutment/Tailings Wells
BW-1	Artesian Well above Buckskin Dam	LA	Left Abutment of Rock Toe
002	Pat Hughes Sediment Dam	SRD	Seepage Return Dam Pond
TC-2	Above Pat Hughes Creek	MD	Rock Toe - Main Drain from Paddocks into SRD Pond. Center, lower weir.
TC-1	Below Pat Hughes Creek	RA	Right Abutment of Rock Toe
SQ-2	Below Guard Gate on Squaw Creek at USGS Station	PPS	Pump Back Station (below SRD)
SQ-2.5	250 ft. below confluence of Squaw and Bruno Creek	MW-1	Monitoring Well (below Pump Back)
SQ-3	Below Redbird Mine at Squaw Creek	DS-1	Down Stream Spring (below Pump Back)
RB-1	Creek above Redbird Mine/drain from west into Squaw Creek	SP-1	Sediment Pond (1/4 mile below Pump Back)
SQ-4	Above Guard Gate at USGS Station	RIS I	Upper Bruno Creek
LS	Limestone Spring Sediment Dam (above SQ-4)	TP	Tailings Pond Water (barge)
EP-1	Beaver Pond (below Limestone Spring at Bruno Creek Mouth)	RIS II	Right abutment above drop boxes
003	Beaver Pond Stormwater D.P.	DD	Diversion Ditch left of tailings

WATER MONITORING PROGRAM
PAGE 2

The following is a list of the general surface water sampling locations:

- SQ-2: Squaw Creek below the confluence with Bruno Creek and 25 feet above the second bridge above the gate.
- SQ-2.5: Squaw Creek 250 feet below the confluence with Bruno Creek (at boulder).
- SQ-3: Squaw Creek above the confluence with Bruno Creek and 100 feet below Redbird mine.
- SQ-4: Bruno Creek at the US Gauging Station (USGS) and above the guard gate.
- TC-1: Thompson Creek 250 feet below the confluence with Pat Hughes Creek and one mile above the Transfer Pump Sump.
- TC-2: Thompson Creek one-fourth mile above confluence with Pat Hughes Creek and below the confluence with Unnamed Creek.
- TC-3: Thompson Creek above the confluence with Unnamed Creek and below the confluence with Buckskin Creek.
- TC-4: Thompson Creek above the confluence with Buckskin Creek and below the confluence with Alder Creek.
- 001: Buckskin Creek sediment dam discharge point.
- 002: Pat Hughes Creek sediment dam discharge point.
- 003: Beaver Pond Sediment Control Structure - Stormwater Discharge Point on Bruno Creek.

1.2.2 Tailings Area:

Surface and ground water stations shown in Figure 2. The following is a brief description of these stations:

Surface Water Stations:

- TP: Tailings pond (barge).
- RIS I: (Upper) Head of Bruno Creek at juncture of the RIS road and one-fourth mile from the north end of the Diversion Ditch.
- RIS II: (Intermediate) Parallel with and above drop boxes at right abutment of the header line and on the RIS road.

WATER MONITORING PROGRAM
PAGE 3

- RIS: (Lower) At pumpback on the right abutment.
- LA: Left Abutment of the Rock Toe.
- MD: Main Drain (lower, center) of the Rock Toe.
- RA: Right Abutment of the Rock Toe.
- DD: Diversion Ditch on left abutment above tailings line at the end of the ditch before it drops into the pipeline going to pumpback.
- PBS: Pump-back system, inlet to sump on lower tailings road south of the Seepage Return Dam.
- DS-1: First down stream spring 100 feet below pumpback system and 25 feet below the monitoring well on Bruno Creek (east bank).
- SP-1: Sediment pond at elevation 6640 ft. on Bruno Creek, one half mile below pumpback system.
- RB-1: Redbird Creek tributary to Squaw Creek one mile above Redbird Mine..

Ground Water Stations:

- MW-1: Monitoring well located approximately 100 feet below the Seepage Return Dam.
- BC-3: Former production well on lower Bruno Creek at Pope John Boulevard.
- LA-2: Monitoring well located on the left abutment above the center line of the tailings impoundment.
- LA-3: Monitoring well located on the left abutment (east upper ridge) of the tailings impoundment.
- RA-2: Monitoring well located on the right abutment (west edge) of the tailings impoundment and one half mile off of the old upper mine (motivator) road.

Deleted Stations:

- SQ-1: Mouth of Squaw Creek, below former construction camp.
- RT: Main drain below rock toe. (Name changed to MD - new weir constructed in 1986, approximately 100 feet below old site.)

- SS-4: SRD spring #4 located between the SRD and the pumpback system.
- SD: SRD main drain located just below the seepage return dam.

1.2.3 Potable Water Wells and Sampling Locations:

Locations of potable water wells are shown in Figure 3. They are as follows:

- CON-1: Concentrator Well #1 which supplies the administration building, the analytical lab and the concentrator.
- CRU-1: Crusher Well #1 which supplies all facilities at the crusher site.

Samples will be collected from each of the distribution systems served by these wells.

1.2.4. Other Wells

- BW-1: Artesian Well 200 feet below Buckskin Dump.

2.0 WATER QUALITY MONITORING PROGRAM 1986 - Summary of Changes

Intensive water quality monitoring of 3 streams located on the Cyprus Thompson Creek claim area has been on going since 1980. Five and a half years of data (2½ yrs. post construction) have been collected for Bruno, Squaw, and Thompson Creek. Two and a half years of data have been collected for 10 stations in the tailing area. With three and a half years of monitoring during production, parameter trends influenced by tailing deposition have been characterized.

The plan objective is to monitor for downstream detection of significant process water influence and to prevent unnecessary contamination of Squaw and Thompson Creeks. The best indicators of process water influence is a sharp or significant increase in conductivity and chloride and to a slower degree, sulfate and molybdenum. Therefore, parameters such as calcium, magnesium, potassium, sodium, fluoride, bromide and sulfide, hardness, and TDS which have already been characterized for each stream have been reduced to an annual scan of all parameters at SQ-2. They would be reinstated if and when the indicator parameters showed evidence of contamination. Process water monitoring will be conducted at one location, the pumpback system, and will continue on an annual basis for all parameters at Station TP. All downstream stations, with one exception will be retained for monitoring. The exception, SQ-1 at the mouth of Squaw Creek was originally sampled primarily to monitor

WATER MONITORING PROGRAM
PAGE 5

effects of Cyprus' sewage waste water treatment facility which is no longer in service.

In general, a less intensive sampling frequency, along with a reduction in number of stations and parameters will be conducted. The nature of the program will be shifted from a water chemistry characterization program to an impact surveillance program.

2.1 SUMMARY TABLE OF 1987 MONITORING PROGRAM

(Numbers refer to accompanying tables indicating parameters to be analyzed).

<u>STATION</u>	<u>WEEKLY</u>	<u>MONTHLY</u>	<u>QUARTERLY</u>	<u>ANNUAL</u>

2.3 PARAMETER GROUPS 1-10

GROUP 1
FIELD PARAMETERS

Conductivity
pH
Temperature
Turbidity

GROUP 2
IMPORTANT INDICATORS

Suspended Solids	Iron
Alkalinity	Manganese
Chloride	Molybdenum
Sulfate	
Xanthates	

GROUP 3
METALS

Copper	Zinc
Lead	Selenium
Mercury	

GROUP 4
REMAINING PARAMETERS FOR TOTAL SURVEY

Total Dissolved Solids	Aluminum
Hardness	Arsenic
Calcium	Barium
Fluoride	Cadmium
Magnesium	Chromium
Potassium	Cobalt
Silica	Nickel
Sodium	Silver
Sulfide	COD
Phosphate	Cyanide
Nitrate	

GROUP 5
SPECIAL PARAMETERS FOR COMPLIANCE

5a - Weekly (NPDES)
Suspended Solids
pH
Continuous Flow

5b - Quarterly (NPDES)
Cadmium
Copper
Zinc
Arsenic

5c - Monthly (NPDES)
Turbidity

5d - Weekly
Turbidity
During runoff
Feb. - June

5e - Monthly
pH and Flow

5f - Weekly
Staff Gauge
During runoff
Feb. - June

GROUP 6
STREAMBED SEDIMENTS: SEDIMENT LOAD

Arsenic	Mercury
Copper	Molybdenum
Iron	Zinc
Lead	
Manganese	

GROUP 7
POTABLE WATER PARAMETERS
(Required for public drinking water systems)

7 a - Monthly

Bacteria - Total Coliform

7 b - Annual

Arsenic	Copper
Barium	Chloride
Cadmium	Iron
Chromium	Manganese
Cyanide	Sulfate
Lead	TDS
Mercury	Zinc
Nitrate	Sodium
Selenium	
Silver	
Fluoride	

GROUP 8
MACROINVERTEBRATE SAMPLING

Identification to species, if possible; spring, fall.

GROUP 9
FISH POPULATION SURVEY

Identification to species and count; data collected in the fall.

GROUP 10

Spawning gravel sediment sampling by USFS.
8 sieve sizes for analysis of spawning gravel suitability.

GROUP 11

Water level.

3.0 GENERAL PROCEDURES - SURFACE WATER

3.1 FIELD METHODS AND MATERIALS

The following parameters will be measured in the field on site, or during winter months, as soon as possible after surface sample collection to insure accurate results.

- o conductivity and temperature
- o pH
- o turbidity
- o air temperature

Conductivity, and water temperature will always be measured instream. Air temperature will be measured on site.

The following materials will be used in sample collection:

- o conductivity meter
- o pH meter and calibration buffers
- o turbidimeter
- o sample containers with labels
- o data forms and field notebook
- o distilled water
- o cooler(s) and ice packs or cubes
- o waterproof pen
- o thermometer

A dissolved oxygen meter will be available for use as necessary.

3.1.1 Calibration Requirements:

Field equipment will be maintained and regularly calibrated according to manufacturer's instructions.

- 1) pH meter - standardization required at least once monthly. Calibration with one appropriate buffer (pH 7, 9 or 10) before each set of continuous measurements is also required. These will be recorded in a permanent log book which is kept with the instrument.
- 2) Turbidimeter - calibration to known standard required before each sample measurement.
- 3) Conductivity meter - Semi-annual calibration check to known standard required.
- 4) Dissolved oxygen meter - when in use, complete calibration required before each series of measurements. Membrane replacement is necessary generally every 2-4 weeks.

All probes and sample beakers must be rinsed with distilled water before and after each sample measurement.

3.1.2 Sample Collection, Documentation & Preservation:

Surface water samples will be collected at each station according to the schedule contained herein (section 2.1). Sample containers will be labelled at the time of collection as follows:

Cyprus Thompson Creek :
Sample Name
Date: Time:
For: (analyses required)
Preservative
Initials of collector

The general procedure for obtaining samples at each sampling station will be as follows:

- o Read staff gauge (if applicable) to determine streamflow.
- o Check battery test switch on all field instruments before use and make sure they are properly calibrated as per section 3.1.1.
- o Take an instream conductivity and temperature reading by inserting probe directly in the stream.
- o Fill sample containers, after proper labelling, by the grab sampling method taking care to avoid contamination of bottles.*
- o Take an air temperature reading making sure the thermometer is not in direct sunlight.
- o Make field measurements of pH and turbidity, by vigorously shaking the unpreserved stream sample bottle and taking a 40ml. subsample.
- o Record all information (station, date, time), measurements, and observations on the appropriate field data form (Appendix A) and sign.

* Preservation of samples will be conducted according to the recommendations outlined in Appendix B.

3.1.3 Transportation:

After sample collection, samples will be packed in ice and transported from the field to the laboratory for analysis within the recommended specified holding times (see Appendix B). The logistics of transportation will be coordinated with the testing laboratory.

3.1.4 Record Keeping:

The original copy of the field data form which also indicates sample volume collected, analyses to be performed and preservative used will be sent with samples to the water testing laboratory (Appendix A). Copies will be retained for the Cyprus files. The back of this form also provides for a lab data report to be completed and signed by the laboratory supervisor and returned to Cyprus. Copies of the lab report will be retained by the laboratory for their records.

Water monitoring results will be kept on file with the Cyprus Environmental department.

3.2 FIELD METHODS & MATERIALS - GROUND WATER

This procedure will be the same as for surface water (Section 3.1) except that

- o conductivity and temperature will be measured on site from a sample beaker.
- o well sampling apparatus (generator to operate well pump, air compressor or bailers) are required.

3.2.1 Calibration Requirements:

Requirements will be the same as for surface water (Section 3.1.1).

3.2.2 Sample Collection:

Ground water samples will be collected at each station according to the schedule contained here (section 2.2, 2.3).

Labelling will be the same as for surface water (section 3.1.2) except that

- o depth to water level using a well sounding probe will be taken before sample collection.
- o the well will be pumped for a specified time to remove from 1-2 volumes of water (volume being equal to the area of the cased well times the water depth from surface to bottom of well) before a sample is taken.
- o pumping time will be recorded and sample will be prevented from aerating as much as possible during collection.
- o in the case of drinking water wells, samples will be taken from designated faucets, after allowing water to run for 2-3 minutes.

3.2.3 Transportation:

Same as for surface water samples (3.1.3).

3.2.4 Record Keeping:

Same as for surface water samples (3.1.4).

3.3 AQUATIC BIOLOGY METHODS

3.3.1 Sampling of benthic macroinvertebrate and fish populations in Squaw and Thompson Creeks will be continued. Specific methods and materials can be found in the 1982 and 1983 reports by Chadwick and Associates, "Aquatic Biological Survey of Thompson Creek and Squaw Creek".

3.3.2 Analysis:

Invertebrates will be identified to genus and species whenever possible. Community relationships and effect of mining, if any, will be discussed.

Fish will also be identified to species and will be measured, weighed and recorded in field book.

A current copy of the USGS Report will be sent to the biologist.

3.3.3 Reporting:

An annual report will be prepared, combining the macroinvertebrate and fish population studies. This report is presented to the interagency task force for annual review.

4.0 LABORATORY ANALYSIS AND PROCEDURES

Physical and chemical analysis will be conducted by an EPA approved and state certified laboratory and/or the Cyprus Analytical Laboratory using analytical methods described in Standard Methods for the Examination of Water and Wastewater, 15th edition, American Public Health Association, 1980. See Appendix C for a list of methods used by the current laboratory contracted by Cyprus. The laboratory will comply with record keeping (Section 3.2.4) and quality assurance procedures as described in the following section.

5.0 QUALITY ASSURANCE PROGRAM

In order to produce valid water quality data from the project area, basic quality control elements will be incorporated in both field and laboratory aspects of the monitoring program.

5.1 BASIC ELEMENTS INSURING QUALITY CONTROL

- o Calibration of field instruments - covered in Section 3.1.1.
- o Proper collection and preservation of samples - covered in Section 3.1.2.
- o Time-sensitive samples will be delivered as soon as possible to be analyzed by the lab within specified holding times (See Appendix C).
- o Transfer of custody and shipment - the field sampler is responsible for proper collection, preservation, packaging and dispatching samples to the laboratory with proper sample collection forms (Section 3.1.5).
- o United Parcel Service slips will be retained for verification of shipment of samples. In case of air delivery, verification will be by telephone.
- o Custody transferred to laboratory upon delivery of samples. Laboratory is then responsible for receiving, adequately storing, and minimal handling of samples.

5.2 QUALITY ASSURANCE SAMPLING

During the course of the Water Monitoring Program, additional (standard and duplicate) samples will be utilized to determine precision and accuracy of the methods used in the laboratory according to the following schedule:

- o Each quarter duplicate samples will be taken, on a rotating basis, from one of the water quality stations being monitored.
- o EPA Quality Control samples will be procured by the laboratory on a continual basis and analyzed as a check for accuracy.
- o As an intra-laboratory check, samples may be split on a regular basis and tested again one to two times as necessary to validate results.

Quality assurance procedures and data will be fully documented and retained for future reference. Field and laboratory personnel will keep complete and permanent records of all sampling and testing to satisfy legal requirements for potential enforcement or judicial proceedings.

6.0 REPORTING

Data will be compiled and available to agencies on a monthly basis. A Yearly summary will be prepared including Aquatic report and water quality data on analysis, storm events, etc. This report is submitted to the Interagency Task Force for review.

Temperature	1000	P,G	Det. on site	No Holding
Turbidity	100	P,G	Det. on site	No Holding

Appendix B (Continued)

- (1) If samples cannot be returned to the laboratory in less than 6 hours and holding time exceeds this limit, the final reported data should indicate the actual holding time.
- (2) Mercuric chloride may be used as an alternate preservative at a concentration of 40 mg/l, especially if a longer holding time is required. However, the use of mercuric chloride is discouraged whenever possible.
- (3) It has been shown that samples properly preserved may be held for extended periods beyond the recommended holding time.

Arsenic	**	Nickel	303A or **
Barium	303C	Nitrogen-Ammonia	417A and 417E
Boron	404A	Nitrogen--Total Kjeldahl	420A and 420B
Cadmium	303A or **	Nitrogen--Nitrate	418C
Calcium	311C or 303A	Nitrogen--Nitrite	419
Carbon Dioxide	406A	Nitrogen--Organic	420
Chloride	407A	Orthophosphate	424F
Chlorine Residual	408E	Total Phosphate	424F
Chromium	303A or **	pH	423
Conductivity	205	Potassium	303A
Color	204A	Selenium	**
Copper	303A	Silica	303C
Cyanide	412D	Silver	303A
Fluoride	413B or 413C	Sodium	303A
Hardness	314B	Solids--Total	209A and 209B
Hex Chromium	312B	Solids--Volatile	209E
Hydrogen	427D	Solids--Suspended	209D
Iron	303A	Solids--Settleable	209F
Lead	303A or **	Sulfate	426B
Magnesium	303A	Sulfide	427B and 427D
Manganese	303A	Tarmin & Lignin	513
Mercury	303F		

Appendix C (continued)

	Method Number
Temperature	212
TOC	505
Turbidity	214A
Zinc	303A
Carbonate	406C or 403
Bicarbonate	406C or 403
Oil & Grease	503A and 503C
BOD	507
COD	508A
Bacteria--Total Coliform	908A and 909A*
Bacteria--Fecal Coliform	908C and 909C*
Bacteria-Fecal Strep	910A and 910B*
Bacteria--Total	907

* Either method upon request

** Analysis by Graphite Furnance Technique EPA Method
206.2, 213.2, 218.2, 219.2, 239.2, 249.2, 270.2

This list was submitted by Analytical Laboratories of Boise, Idaho, who is currently contracted by Cyprus to perform most of the analyses.
